

Addendum #3 to SJPC TOS 01112022 – January 10, 2022

Answers to Potential Bidders' Questions

Q1. Could you clarify Exhibit A – TOS Requirements, System Admin, Item 27, “Ability to create, maintain, and view scheduled auto job history for various date/time ranges.” I assume this refers to regularly scheduled jobs that need to be done like crane maintenance and not car repair?

A1. This is not necessarily just for pre-scheduling and reminders for equipment maintenance (crane, etc.). It also refers to the capability of the TOS to create default work queues/job lists and have the system automatically send the next work instruction to the remote data terminals (handhelds, display units in forklifts or other yard equipment, etc.).

In addition, although it was originally designated as a current requirement in Exhibit A, **please regard System Admin #27 as a future requirement.**
